

## How to Apply a Hard Front (Acrylic) Wig

Ensuring the hair under the wig is prepared correctly is very important, but equally important is ensuring the wig is applied correctly and securely.

### You Will Need:

1. Hard front (Acrylic) Wig
2. Wiggles (2 inch/5cm)

### Process

1. Applying the wig is very similar to applying the stocking cap. Place fingers on the front of the wig and gently hold onto forehead.
2. Gently pull the wig over the head towards the neck hair line (*being careful not to over stretch the wig*). You may find this easier with assistance (*usually from the person wearing the wig*).
3. Ensure the wig is covering the entire wig cap and that the wig cap is not visible.
4. Some hard front wigs are elasticised and have tabs in the nape area that can be adjusted to give a better fit.
5. Use hair pins to secure the wig to the prepped hair underneath. We recommend using wiggles around 2 inch/5cm.
6. Secure the wig at the centre front firstly, ensuring the catch the pin under a pin curl and/or stocking cap.
7. Secure each side of the wig just below the temple and above the ear. Ensure to catch the pin under a pin curl and/or stocking cap.
8. Secure the back of the wig by pinning each corner of the wig. Once again, ensuring the get under a pin curl and/or the stocking cap.
9. Should the wig need securing further, more pins can be added around the centre band of the head or where you know there to be pin curls.
